Resume

Name: Reza Khoshi
Address: Tehran - Iran
Email: Khalil.khoshi@gmail.com
Phone: 09379522928

Summary

After graduating from university, I started working as an IT specialist. Over a decade of work experience, I've continuously learned and developed my knowledge according to my interests and the technical needs of the company. I gained professional experience in Microsoft services, working with firewalls, VoIP services, and configuring Cisco switches (as needed) during my collaboration with Afranet. Recently, due to the organization's need for product delivery facilitation and automation and the attractions of DevOps, I have turned to this field and continue to learn and work in it.

Team spirit, thoroughly following up on technical issues until they are resolved, a continuous desire to learn, flexibility, and a bit of humor are characteristics I am glad to possess.

Education

Bachelor of Computer Engineering (Major: Software Engineering)
Final Project: launching a website for selling cosmetic and hygiene products

Master of Business Administration (Major: Technology)
Thesis: Examining the role of digital transformation in the banking industry

Skills and Certifications

DevOps:

- Linux LPIC-1
- Scripting language: Bash script
- CI/CD pipeline
- VCS: GIT
- Container Runtime: Docker
- IAC: Ansible
- Orchestration platform: Kubernetes (Administration) – Docker swarm
- Monitoring: Grafana, Prometheus

IT Administrator:

- MS Exchange 2019
- VOIP: Asterisk
- MSCA
- VCP6 (vCenter ESXi)
- CCNA R&S
- Microsoft SCCM
- Skype For Business
- Firewall: Fortigate 100F – Sophos XG230 – pfsense – Kerio control
- Backup: Veeam
- Antivirus: Symantec Endpoint Protection

Experience

DevOps Specialist, ICS company, *(march 2024 – present)*
I am working in iran credit scoring company that operates between central bank, banks and BNPL companies. banks and BNPLs like Digipay relys on loan payments which needs to have risk management by checking customers credit scores. These scores are calculated by customers data which gathered by Iran credit scoring company.
*As a **DevOps engineer** My responsibilities are :*
support operational services , implementing tools like Kubernetes for orchestrating microservices and ensure that they are up and running consistently also enabling seamless operations and consistent performance for the credit scoring system.

Implemented Communication and Collaboration Tools:
- Deployed Mattermost for streamlined communication between the development team.
- Integrated Nextcloud with Active Directory Authentication for file sharing and collaboration within ICS company.

Dockerized Microservices:
- Dockerized microservices using .NET and Python stacks.

CI/CD Implementation:
- Installed GitLab with Active Directory authentication.
- Set up Nexus as a local repository for storing and proxying Docker images, Python (pip), and .NET (NuGet) packages and ..
- Configured GitLab Runners to build images and deploy services to both staging and production zones, using images stored in Nexus.
- Setting up ELK stack for log management with Kafka to handle large log volumes.
- Setting up Grafana with Prometheus for monitoring

Kubernetes Implementation:
- Set up Kubernetes cluster
- Implemented Deployment ,Ingress and HPA for needed applications, with auto-scaling based on needed metrics.

System Administrator/ DevOps Specialist, Middle East Investment Bank (under establishment), *(July 2020 – march 2024)*
Implemented and supported network and required services: FortiGate 100F, HP servers,
Network infrastructure leveraging Cisco switches and Ubiquiti APs,
ESXi and vCenter, Microsoft NPS, Active Directory, Exchange 2019, Veeam backup, FileServer
Jira and Confluence (installation and maintenance),
GitLab, CI/CD, Docker, Kubernetes, Monitoring (Grafana Prometheus),

*"In my role as a **DevOps engineer**, I am charged with ensuring the robust execution and operation of the investment bank's products. My responsibilities encompass using GitLab for precise version control and deploying CI/CD pipelines to streamline the development and deployment processes. I manage containerization with Docker, ensuring applications are efficiently packaged and isolated. As the orchestrator within the control plane section of the SDN network, Kubernetes facilitates the effective deployment and scaling of applications to maintain optimal performance across all platforms. Additionally, I leverage Grafana and Prometheus for their superior monitoring and alerting capabilities, which are vital for maintaining system reliability and ensuring the seamless operation of our automated workflows."*

IT Manager, Amin Avid Brokerage, *(February 2019 - July 2020)*
IT Specialist, Amin Investment Bank
Supported firewalls and switches from two companies (Sophos, pfsense, Cisco Switches Firewall), Active Directory, File Server, Print Server, Mail Server (Exchange 2016), Veeam Backup, VOIP (FreePBX), Camera (Dahua, Hikvision), Antivirus (Symantec), vCenter and ESXi.

IT Specialist, Afranet *(February 2016 - February 2019)*
Worked with Microsoft services such as:
Active Directory, File Server, Print Server, Mail Server (Exchange), Skype for Business,
SCCM as a tool for creating Software Center, remote, and group sending of security patches,
VOIP (FreePBX-Asterisk), migration from Panasonic telephone system to VOIP,
Tools from Symantec such as SEP as antivirus,
Different firewalls including TMG and Kerio,
Limited access and configuration on the company's internal switches.

IT Specialist, Social Welfare North Khorasan *(March 2012 - December 2013)*
Provided crucial IT support and services, ensuring seamless operations and user satisfaction through effective problem-solving and system management.
